19. Troubleshooting

1. What is Scorr?

Scorr (scorr.walfia.ai) is a company workspace for performance, attendance, and rewards. One login serves the website, Android app, and iPhone home-screen app.

Each registered company is a private tenant. Staff in Company A cannot open Company B's people, KPIs, attendance, or GPS records.

What you can run in one place

- KPI tasks in four categories, with manager ratings and an automatic monthly score.
- Departments, people, roles, and reporting lines.
- GPS attendance (geofence), shifts, leave, and live team location for authorized managers/admins.
- Rewards points from KPI score, catalog redemption, and approvals.
- Daily work reports, analytics, and PDF/Excel/CSV exports.

The person who registers the company becomes the first Administrator after Walfia approves the organization.

2. How to Register Your Organization

Use the public Register Company form. No credit card is required. After approval you receive a 3-day trial with full product access.

2.1 Fill the form

Step 1: Open <https://scorr.walfia.ai> and choose Register Company.

Step 2: Enter company name, industry, and approximate headcount.

Step 3: Enter your name, work email, phone, and a password (at least 6 characters, confirmed).

Step 4: Choose a plan (Trial / Starter / Professional / Enterprise).

Step 5: Scorr emails a one-time code (OTP) to that work email. Enter the code to prove you own the mailbox. Registration does not complete without this step.

Step 6: Submit. You will see that the company is waiting for platform approval.

2.2 After you submit

- The organization is stored as pending.
- Walfia (platform owner) is notified by email and in the Companies console.
- When approved, sign in with the same email and password.
- Scorr opens the Admin dashboard. A short onboarding wizard can help you add people, a default shift, and first KPI categories.

Do not create the rest of your team until the company is approved and you can sign in as Admin.

2.3 First sign-in

Step 1: <https://scorr.walfia.ai> Sign In.

Step 2: Accept the monitoring and data-use policy (attendance location at clock-in/out and KPI records). Sign-in is blocked until this is checked.

Step 3: Admins, managers, and HR must then set up an authenticator app (Google Authenticator, Microsoft Authenticator, or Authy) and enter a 6-digit code. Demo sandbox accounts skip this.

3. User Roles at a Glance

Each person has one role. The role chooses the dashboard and what the database will allow.

Role	Main purpose
Admin	Whole company: people, departments, assign KPIs, points board, rewards catalog, attendance, GPS sites, live map, reports, analytics, branding in Settings.
Manager	Team only: assign tasks, team ranking, own KPIs, team attendance/leave, live tracking of reports, team rewards, password and daily report in Settings.
Employee	Own work: My KPIs, attendance/leave/shift, rewards, password and daily report in Settings. No branding tab.
HR	Company shifts and rewards support. Does not replace Admin for users or branding.

Access rules

- Employees see only their own KPIs, attendance, points, and reports.
- Managers see direct reports (and department team where designed), not every company.
- Admins see the organization they belong to, not other companies.
- Platform owner (Walfia) approves companies; it is not a second copy of your staff files for daily HR work.

4. Administrator tabs (complete)

Sidebar groups: Organization, Performance, Workforce. Branding is not its own tab — it lives under Settings.

4.1 Organization

People

Company directory. Add users, set role (employee/manager/admin/HR), department, reporting manager, reset password, reset authenticator, edit account, remove user, open that person's assigned tasks.

Departments

Create/rename/remove departments (Sales, Finance, ...). This is structure only — not a KPI score library.

KPI Points

Organization scores and points for individuals this period.

4.2 Performance

Assign Task

Create a KPI in a category, set weight and dates, pick department then person, optional note, Assign. Then review assigned tasks and rate them. Sequential dropdowns: department !' person !' KPI

Analytics

Company KPI health, trends, and attainment.

Reports

Monthly or quarterly export as Excel, PDF, or CSV.

Rewards

Monthly points job, catalog, approve and fulfill redemptions.

4.3 Workforce

Attendance

Leave approvals, attendance history, check-in oversight for the company.

Daily Reports

Read submitted daily work logs by department and role.

Live Tracking

Map and table of who is at site, away, or offline (from GPS pings while checked in).

Office GPS

Office/site pin, radius (typically 50 m), assign sites to staff.

Settings

White-label branding: company name, logo, tagline, colors. Managers and employees cannot open this.

5. How to Add Employees, Managers & Admins

Only an Administrator can create new accounts. You must already be signed in to your company's Admin dashboard (not the demo sandbox).

5.1 Before you add people

- Create Departments first (Admin !' Departments). Managers and employees
- Create Managers before Employees if you want to assign a reporting manager.
- Have each person's work email ready — that email becomes their login.

5.2 Open the Add User form

Step 1: Sign in as Admin at <https://scorr.walfia.ai>

Step 2: Open the People tab (default home of Admin).

Step 3: On the right (or below on mobile), find the panel "Add new user".

5.3 Fields you fill in

Field	What to enter
Full name	Person's display name (e.g. Sara Khan).
Email	Work email they will use to sign in.
Password	Temporary password (min 6 characters). Share it securely; they can change it later.
System role	Choose Employee, Manager, or Admin.
Department	Required for Manager and Employee. Not required for Admin.
Assign manager	Only for Employee. Optional — pick a manager in the same department.

5.4 How to add an Employee

Step 1: Set System role to Employee.

Step 2: Select their Department.

Step 3: Optionally select Assign manager (managers in that department appear in the list).

Step 4: Enter name, email, password !' click Register user.

Step 5: Tell the employee their email and temporary password so they can sign in.

5.5 How to add a Manager

Step 1: Set System role to Manager.

Step 2: Select Assign department to manager (required).

Step 3: Enter name, email, password !' Register user.

Step 4: Later, when adding employees in that department, select this manager as their reporting manager.

5.6 How to add another Admin

Step 1: Set System role to Admin.

Step 2: Department is not required for admins.

Step 3: Enter name, email, password !' Register user.

Step 4: The new admin can sign in and manage the full organization.

Demo accounts: If you are signed in as the public demo admin, you cannot add real company users. Sign out and use your production company admin account instead.

5.7 After a user is created

- They appear immediately in the Users directory.
- They sign in at scorr.walfia.ai with the email/password you set.
- Scorr opens the correct dashboard based on role (Admin / Manager / Employee).
- You can change an employee/manager's department from the Users table.
- Use Reset password on a user card if they forget their password.

6. First-Time Admin Setup Checklist

After your company is approved, complete these steps in order for a smooth launch:

Step 1: Sign in as Admin.

Step 2: Departments — create your departments. Add KPI metrics on each board (library totals may exceed 100%).

Step 3: Users — add Managers for each department.

Step 4: Users — add Employees and assign each to a department and manager.

Step 5: Office GPS — add your office locations if you use GPS attendance.

Step 6: Settings — set company name, logo, and colors (branding).

Step 7: Assign Task — department !' person !' KPI category, weight, dates.

Step 8: Rewards — review the catalog.

Step 9: Ask staff to install an authenticator (admins/managers/HR) and allow location on the phone if you use GPS attendance.

7. Manager tabs (complete)

Managers do not see the whole company. They work with people who report to them, plus their own KPIs. There is no Branding tab.

Assign Task

Create a KPI (category, name, weight, dates, optional note) and assign it to someone in the manager's department.

Tasks and Points panes: assigned work vs team scores.

Team

Ranking of direct reports by this month's KPI achievement. Tap a person to open a read-only view of their My KPIs.

My KPIs

Tasks assigned to the manager. This month score, rating (Outstanding ... Unsatisfactory), and points per task after the admin/supervisor rates them.

Attendance

Team leave, check-in, shifts, and a Live tracking section for the team map.

Rewards

Approve team redemptions and see team point balances. Personal points are not shown here.

Settings

Change password and submit the manager's daily work report. No logo/theme editor.

Managers cannot

- Create company users, departments, or branding.
- See other companies or unrelated departments' staff.

8. Employee tabs (complete)

Employees only see their own records. There is no Branding tab and no Assign Task.

My KPIs

This month score (achievement of assigned weight), performance rating, done count, and one card per task: category, weight, dates, points after manager rating, Started/Completed on Monthly Goal and Urgent Tasks.

Attendance

GPS check-in/out, assigned shift, leave requests, personal history.

Rewards

Balance, catalog, redeem, pending/approved/fulfilled.

Settings

Change password and daily report.

9. HR role

HR is a dedicated role for shift assignment and rewards operations without full Admin powers (no People directory, no branding, no company-wide KPI assign unless also given those tools). HR uses Shifts and Rewards screens.

10. Departments

Departments are folders for people (and which manager owns which team). They are not a second scoring engine.

- Admin creates names such as Sales or Operations.
- Each employee/manager should belong to a department so Assign Task can list them.
- KPI weight cap is per person (pending assignments "d 100%), not per depa
- Removing a department does not delete historical KPI scores already saved on people.

11. KPI tasks and scoring

A KPI is one assigned task with a weight (%). The manager or admin rates it. The employee does not type the score.

11.1 Four categories

- Monthly Goal — employee can mark Started / Completed. Manager rates Achieved / Partially Achieved / Not Achieved.
- Quality — manager rates Good / Average / Poor.
- Punctuality & Behaviour — Always on Time / Behaves Well / Always Late / Behaves Not Good.
- Urgent Tasks — employee can mark progress. Manager rates On Time / Late.

11.2 Assign process

Step 1: Admin or Manager opens Assign Task.

Step 2: Choose department, then the person in that department.

Step 3: Choose category and KPI, set weight (1–100%), start and end dates, optional note.

Step 4: Assign. The person is notified. Pending weights for that one person cannot exceed 100%.

- Other people have their own 100% budgets.

11.3 Points on one task

Points = weight × multiplier from the rating:

- 100% of weight: Achieved, Always on Time, Good, On Time.
- 50% of weight: Partially Achieved, Average, Behaves Well.
- 0% of weight: Not Achieved, Always Late, Behaves Not Good, Poor, Late.

Example: weight 15 %, Achieved !' 15.00 points. Partially Achieved !' 7.50. Not

11.4 This month score and Rating

This month % = (sum of points) ÷ (sum of assigned weights) × 100. One 15% task rated Achieved is 100%, not 15%. Unrated tasks count as 0 points but still sit in the weight, so the score stays honest until they are rated.

- 95–100 Outstanding · 90–94 Excellent · 80–89 Good · 70–79 Needs Improvement · below 70 Unsatisfactory.
- Started/Completed by the employee does not award points by itself — the manager rating does.

12. Attendance, leave and GPS

12.1 Office GPS (Admin)

Step 1: Open Office GPS.

Step 2: Save a site: name, map pin, radius (about 50 metres).

Step 3: Assign the site to people (everyone or selected staff).

- Times use Asia/Karachi.

12.2 How check-in works

- Staff allow location. When they are inside the radius during the assigned shift, Scorr can clock them in.
- Leaving the radius can clock them out. Checkout is GPS-based, not a fake button from another city.
- On Android, a background location service can keep sending pings while a session is open so the live map stays current.
- Remote/hybrid work modes can allow check-in without the office pin when the company enables that for the person.
- If the shift ends, the system can auto check-out.

12.3 Leave

- Employee requests type (including Other) and dates.
- Manager (team) or Admin approves or rejects. Emails go out on status change.

12.4 Shifts

- Managers/HR/Admin set start/end and working days. Employees see My Shift on Attendance.
- Entry/exit can store the location used at clock events.

13. What the app needs from the device

Scorr only asks for permissions that the feature needs. You can refuse; GPS attendance will not work without location.

Permission	Why
Internet	Sign-in, load KPIs, save attendance, send mail via the server.
Location (precise)	Clock in/out at the office geofence; live tracking while checked in.
Location (background)	Android: continue attendance pings if you leave the app during a shift. iOS asks for Always if you use automatic attendance.
Foreground service	Android notification while attendance tracking is active — required by the OS, not ads.
Notifications	Optional: shift/attendance reminders on Android 13+.
Camera	Not used by Scorr itself. Authenticator apps use the camera only to scan the MFA QR on another screen.

What we do not need

- Contacts, photos, microphone, SMS, or call logs.
- Root/jailbreak. Do not install Scorr on a compromised phone.

Location is stored as attendance pings and check-in/out coordinates for your company administrators and managers — not sold, and not shown to other companies.

14. Rewards and reports

Points never expire. After the monthly job, score bands become points:

Monthly KPI score	Points
90% or higher	1,000 points
80% – 89%	500 points
70% – 79%	250 points
Below 70%	0 points

Redemption flow

Step 1: Admin maintains the catalog (name, cost in points, description).

Step 2: Employee redeems an item.

Step 3: Manager or Admin approves.

Step 4: Item is marked fulfilled when delivered.

14.1 Reports

- Admin Reports — monthly/quarterly Excel, PDF, CSV.
- Admin Analytics — charts and attainment.
- Personal export — My KPIs PDF/Excel.
- Admin Daily Reports — text logs from Settings on staff dashboards.

15. Mobile apps

15.1 Android

Step 1: Open <https://scorr.walfia.ai> on the phone.

Step 2: Go to the Mobile App / Download section.

Step 3: Download scorr.apk and allow install from this source if asked.

Step 4: Open the app and sign in with your Scorr email and password.

15.2 iPhone / iPad

A native App Store IPA is not required for daily use. Install as a Home Screen app:

Step 1: Open Safari and go to <https://scorr.walfia.ai>

Step 2: Tap the Share button.

Step 3: Tap Add to Home Screen.

Step 4: Open the Scorr icon and sign in.

- Enable Location when prompted so GPS attendance works.

16. Security — how Scorr protects data

Scorr is built so ordinary users never hold database master keys. The browser and the Android app only use a public “anon” key plus your personal login token. Privileged actions run on the server as checked functions.

16.1 Transport and hosting

- <https://scorr.walfia.ai> uses TLS (HTTPS) on Vercel. The API is https://*.supabase.co with TLS.
- Data at rest is stored in Supabase/PostgreSQL on AWS (Asia), with platform disk encryption.
- Email is sent from noreply@scorr.walfia.ai through Resend; templates are server-side.

16.2 Accounts

- Passwords are stored by Supabase Auth (hashed). Scorr never stores a readable password.
- Too many failed logins on an email are rate-limited (about 15 minutes).
- Forgot password does not tell attackers whether an email exists. Reset is time-limited.
- Company signup requires an email OTP before the account is created.
- Idle sessions sign out after 20 minutes of no activity.
- Admins, managers, and HR must enroll TOTP (authenticator). AAL2 is required for sensitive admin actions such as resetting someone else’s authenticator.
- If an authenticator is lost, a company admin (who already passed MFA) can reset factors so old 6-digit codes stop working. The person scans a new QR. Phone authenticator apps do not allow Scorr to delete the old icon on the phone — the user should remove the old Scorr entry themselves.

16.3 Isolation and permissions

- Every business record is tied to a company. Row Level Security and role checks (employee / manager / admin / HR / platform owner) decide who can read or write.
- Employees cannot call admin user-create or branding save.
- Managers cannot assign KPIs outside the allowed department/team.
- GPS pings are written as the signed-in user, not as an arbitrary other employee id from the phone.

16.4 Policy and audit

- Sign-in records that the user accepted location/KPI monitoring.
- Admins can reset passwords and authenticators with an audit trail in notifications/email.
- Deleting a company (platform owner) removes that tenant’s workspace.

17. What “secure” means (honest guarantee)

No cloud HR product can truthfully promise that it is “totally secure forever.” Attackers, stolen phones, and weak passwords exist in every industry. What Scorr does guarantee as a product design is the following:

- Your company data is not mixed into another company’s screens.
- Traffic to Scorr and the database is encrypted in transit (HTTPS).
- Staff passwords are not stored in plain text.
- Privileged roles need an authenticator, not password alone.
- Location is used for attendance you enabled, not for silent advertising.

Your side of the guarantee: unique passwords, do not share authenticator screenshots, keep phones updated, only install the APK from scorr.walfia.ai, and ask Admin to reset MFA if a device is lost.

Walfia’s side: keep hosting on reputable providers (Vercel, Supabase/AWS), restrict service keys to the server, and keep improving database rules. Independent penetration tests and certifications (SOC 2 / ISO 27001) are a separate commercial engagement — they are not claimed as already issued in this guide.

If you need a formal DPA, data-residency letter, or pentest report for procurement, contact Walfia (info@walfia.ai) so the legal pack matches your contract — this PDF is an operational guide, not a legal warranty.

18. How the platform is built

Scorr is the live product at <https://scorr.walfia.ai>.

- Website: React application on Vercel.
- Login and data: Supabase Auth + PostgreSQL.
- Mail: Resend.

Item	Value
App	https://scorr.walfia.ai
This PDF	https://scorr.walfia.ai/downloads/Scorr-Client-Feature-Guide.pdf
Hosting	Vercel (HTTPS)

19. Troubleshooting

Problem	What to try
Cannot sign in	If the email is registered: you will see "Incorrect password." If the email is unknown: "Incorrect email and password." After company registration, wait until the company is approved.
Wrong dashboard opens	Your role is set incorrectly. Ask Admin to check role on Users tab.
Cannot add users	You must be Admin (not Manager/Employee). Demo admin cannot add real users.
Manager list empty	Create Manager accounts first, in the same department as the employee.
Department required error	Managers and employees need a department. Create one under Departments.
Authenticator lost	Admin !' People !' "!" Reset authenticator. Then sign in and scan. Delete the old Scorr row in Google Authenticator yourself.
GPS check-in fails	Enable location (and background on Android); confirm Office GPS site is assigned.
No daily reports visible	Only Admin sees others' reports. Staff must submit from Daily Report tab.
Cannot assign KPIs	Admin: select department first, then a person in that department, then KPI(s), then dates. The person list is empty until a department is chosen. That person's pending weight cannot exceed 100%.
Assignment rejected at 110%	That employee already has too much pending weight. Pick a smaller KPI or complete/remove an existing assignment. Other employees are not counted.
Assigned 10% became 100%	This is fixed: assigned weight stays as set (1–100%). Refresh the site after the latest update.
