16. Quick Troubleshooting

1. What is Scorr?

Scorr is an HR performance platform for companies. It brings KPIs, attendance, GPS check-in, leave, rewards, daily work reports, and management reports into one secure place.

Each company gets its own private workspace. Your data is never shared with other organizations.

Three types of users

- Administrator — runs the whole company account (users, departments, settings, reports).
- Manager — leads a department/team (assign KPIs, approve leave, track the team).
- Employee — does daily work (complete KPIs, check in, request leave, submit daily reports, redeem rewards).

Tip: The person who registers the company becomes the first Administrator after approval.

2. How to Register Your Organization

Anyone starting a new company on Scorr uses the public registration form. No credit card is required. New companies receive a 3-day free trial after approval.

2.1 Step-by-step registration

Step 1: Open <https://scorr.walfia.ai> in a browser.

Step 2: Click “Register Company” (top navigation or hero button).

Step 3: Fill in organization details:

- Company name (required)
- Industry and approximate employee count (recommended)
- Website, address, city, country (optional)

Step 4: Fill in your contact details as the company admin:

- Full name and job title
- Work email and phone (required)
- Password (minimum 6 characters) and confirm password

Step 5: Choose a subscription plan (Trial / Starter / Professional / Enterprise). Trial starts with full platform access for 3 days after approval.

Step 6: Submit the form.

Step 7: You will see: “Please wait for admin approval.”

2.2 What happens after you submit

- Your organization is created as a pending registration.
- The Scorr platform admin receives an email and in-app notification.
- Review usually completes within about 24 hours.
- When approved, sign in with the same email and password you registered.
- You land in the Administrator dashboard and can set up departments and users.

Important: Do not create employee accounts until your company registration is approved and you can sign in as Admin.

2.3 After approval — first sign-in

Step 1: Go to <https://scorr.walfia.ai> and open Sign In.

Step 2: Enter your registered email and password.

Step 3: Scorr opens the Admin dashboard automatically because your role is Admin.

3. User Roles at a Glance

Every person in your company has exactly one role. The role decides which screens they see and what they can change.

Role	Main purpose
Admin	Full company control: add users, departments, branding, KPIs org-wide, attendance oversight, GPS sites, rewards catalog, analytics, daily reports review.
Manager	Lead their department/team: assign KPIs to direct reports, approve leave/attendance, team rewards, shifts, live tracking of their team, personal KPIs, daily report.
Employee	Personal work: view/complete KPIs, GPS check-in, leave requests, points & rewards, submit daily work report.

Access rules (simple)

- Employees see only their own data.
- Managers see only their assigned team (direct reports), not the whole company.
- Admins see the entire organization.
- These rules are enforced by secure login and database permissions.

4. Administrator — What They Do

The Admin dashboard is organized in a sidebar: Organization, Performance, and Workforce. Below is what each area is for in plain language.

4.1 Organization

Users

Directory of everyone in the company. Search and filter by role or department. Add new people, change department, reset passwords, or remove accounts. This is where you create Employees, Managers, and additional Admins.

Departments

Build your company structure (e.g. Sales, HR, Operations). Set department KPI weightages that must total 100% across the company. Edit KPI indicators and use templates for common departments.

Branding

Put your company name, logo, tagline, and colors on the platform so it looks like your product.

4.2 Performance

Assign Task (KPIs)

Assign weighted KPI tasks to employees across the organization, with start/end dates. Weights for each person should total 100%.

Reports

Download monthly or quarterly company reports as PDF, Excel, or CSV.

Analytics

Charts for KPI health, trends, forecasts, and attainment by department or category.

Rewards

Run the monthly points job, approve/fulfill redemptions, and manage the rewards catalog (gift items employees can redeem).

4.3 Workforce

Attendance

Approve leave org-wide and review attendance history (filter by department, export CSV).

Daily Reports

Read daily work logs submitted by managers and employees, filtered by department and role.

Office GPS

Define office/site locations with a map radius so staff can auto check in when they arrive.

Live Tracking

See who is at site, away, or offline on a live map and table.

5. How to Add Employees, Managers & Admins

Only an Administrator can create new accounts. You must already be signed in to your company's Admin dashboard (not the demo sandbox).

5.1 Before you add people

- Create Departments first (Admin ! Departments). Managers and employees
- Create Managers before Employees if you want to assign a reporting manager.
- Have each person's work email ready — that email becomes their login.

5.2 Open the Add User form

Step 1: Sign in as Admin at <https://scorr.walfia.ai>

Step 2: Open the Users tab (default home screen of Admin).

Step 3: On the right (or below on mobile), find the panel "Add new user".

5.3 Fields you fill in

Field	What to enter
Full name	Person's display name (e.g. Sara Khan).
Email	Work email they will use to sign in.
Password	Temporary password (min 6 characters). Share it securely; they can change it later.
System role	Choose Employee, Manager, or Admin.
Department	Required for Manager and Employee. Not required for Admin.
Assign manager	Only for Employee. Optional — pick a manager in the same department.

5.4 How to add an Employee

Step 1: Set System role to Employee.

Step 2: Select their Department.

Step 3: Optionally select Assign manager (managers in that department appear in the list).

Step 4: Enter name, email, password ! click Register user.

Step 5: Tell the employee their email and temporary password so they can sign in.

5.5 How to add a Manager

Step 1: Set System role to Manager.

Step 2: Select Assign department to manager (required).

Step 3: Enter name, email, password ! Register user.

Step 4: Later, when adding employees in that department, select this manager as their reporting manager.

5.6 How to add another Admin

Step 1: Set System role to Admin.

Step 2: Department is not required for admins.

Step 3: Enter name, email, password ! Register user.

Step 4: The new admin can sign in and manage the full organization.

Demo accounts: If you are signed in as the public demo admin, you cannot add real company users. Sign out and use your production company admin account instead.

5.7 After a user is created

- They appear immediately in the Users directory.
- They sign in at scorr.walfia.ai with the email/password you set.
- Scorr opens the correct dashboard based on role (Admin / Manager / Employee).
- You can change an employee/manager's department from the Users table.
- Use Reset password on a user card if they forget their password.

6. First-Time Admin Setup Checklist

After your company is approved, complete these steps in order for a smooth launch:

Step 1: Sign in as Admin.

Step 2: Departments — create your departments and set weightages so they total 100%.

Step 3: Users — add Managers for each department.

Step 4: Users — add Employees and assign each to a department and manager.

Step 5: Office GPS — add your office locations if you use GPS attendance.

Step 6: Branding — set company name, logo, and colors.

Step 7: Assign Task — create first KPI assignments for employees.

Step 8: Rewards — review or edit the rewards catalog.

Step 9: Ask managers and employees to sign in and enable location on mobile if needed.

7. Manager — What They Do

Managers focus on their team. They do not see the whole company — only people assigned to them as direct reports, plus their own personal KPIs.

7.1 Daily / weekly work

Team Performance

See team points, leaderboard, and who is on track / at risk / off track. Open any team member's performance view (read-only).

KPI Tasks

Create KPI definitions for the department, assign weighted KPIs to team members (weights must total 100% per person), and review all current assignments.

Team Rewards

Approve redemption requests and mark rewards as fulfilled when delivered.

Attendance & Leave

Approve or reject leave and attendance corrections. Create shifts and assign them. View today's team attendance and history.

Live Tracking

Map/table of where the team is (at site / away / offline).

Daily Report

Write and submit the manager's own daily work log for the admin to review.

My KPIs / Personal

Managers also complete their own KPI tasks and can export personal reports.

7.2 What managers cannot do

- Cannot register new company users (Admin only).
- Cannot change company branding or create departments.
- Cannot see other departments' staff unless those people report to them.

8. Employee — What They Do

Employees use a simpler dashboard focused on their own work.

8.1 My KPIs

- See Performance Index (health score) — Excellent / Needs Improvement / Critical.
- Open each KPI card: weight, achieved %, dates, status (on track / at risk / off track).
- Mark a task complete when finished — the manager is notified.
- Export personal KPI report as PDF or Excel.

8.2 Attendance & leave

- GPS check-in / check-out when at an assigned office site (location permission required).
- Request leave (type + dates) and track approval status.
- View personal attendance history and assigned shift.

8.3 Rewards

- See points balance and how monthly KPI score converts to points.
- Browse the catalog and redeem rewards.
- Track redemption status (pending !' approved !' fulfilled).

8.4 Daily Report

- Write what you did today in the Daily Report tab.
- Submit for the day — Admin can read it later in Daily Reports.
- You can view your own past submissions.

9. Daily Work Reports

Employees and managers submit a short text log of work done each day. Only Administrators review these reports.

9.1 For staff (Employee / Manager)

Step 1: Open the Daily Report tab on your dashboard.

Step 2: Select the date (usually today) and write your work summary.

Step 3: Click Submit. The report is saved in the company database.

9.2 For Admin

Step 1: Open Workforce !' Daily Reports .

Step 2: Choose a department from the dropdown (or All departments).

Step 3: Filter by Managers & Employees / Managers only / Employees only.

Step 4: Pick a person to read their report. People who have not submitted show as “Not submitted”.

10. KPI & Performance (Simple Explanation)

KPIs (Key Performance Indicators) are measurable goals. In Scorr:

- Each department has indicators with weights that add up to 100% for the company structure.
- Each employee gets personal KPI tasks whose weights also add up to 100%.
- Health score = sum of (Achieved % × Weight %) across all of that person's KPIs.

Status colors

Status	Meaning
On Track	Progress looks healthy toward the target/deadline.
At Risk	Needs attention — slipping or deadline close.
Off Track	Significantly behind.
Completed	Employee marked the task complete.

Deadlines

- Managers/admins set start and end dates when assigning KPIs.
- Overdue tasks trigger notifications and email alerts.
- Repeated missed deadlines can apply a points penalty.

11. Attendance, Leave & GPS

11.1 Office GPS (Admin setup)

Step 1: Admin !' Office GPS.

Step 2: Add a site: name, address, coordinates (map or live GPS), and radius.

Step 3: Assign the site so employees can auto check in when they enter the zone.

11.2 Check-in for staff

- Allow location permission in the browser or mobile app.
- When inside the geofence, the system can clock them in automatically.
- Leaving the zone can clock them out.

11.3 Leave

- Employee submits leave with type and date range.
- Manager (for their team) or Admin approves/rejects.
- Balances are tracked; email alerts are sent on status changes.

11.4 Shifts (Manager)

- Create shifts with start/end time and grace period (overnight supported).
- Assign shifts to team members; employees see "My Shift".

12. Rewards & Points

Points never expire. At month end, Admin runs the monthly points job based on KPI score tiers:

Monthly KPI score	Points
90% or higher	1,000 points
80% – 89%	500 points
70% – 79%	250 points
Below 70%	0 points

Redemption flow

Step 1: Admin maintains the catalog (name, cost in points, description).

Step 2: Employee redeems an item.

Step 3: Manager or Admin approves.

Step 4: Item is marked fulfilled when delivered.

13. Reports & Analytics

- Admin Reports — monthly/quarterly exports (PDF, Excel, CSV) with KPI snapshots and insights.
- Admin Analytics — status charts, trends, forecasts, attainment by department.
- Personal export — employees and managers download their own KPI PDF/Excel.
- AI narratives — optional commentary on KPI performance to help reviews.

14. Mobile Apps (Android & iPhone)

14.1 Android

Step 1: Open <https://scorr.walfia.ai> on the phone.

Step 2: Go to the Mobile App / Download section.

Step 3: Download scorr.apk and allow install from this source if asked.

Step 4: Open the app and sign in with your Scorr email and password.

14.2 iPhone / iPad

A native App Store IPA is not required for daily use. Install as a Home Screen app:

Step 1: Open Safari and go to <https://scorr.walfia.ai>

Step 2: Tap the Share button.

Step 3: Tap Add to Home Screen.

Step 4: Open the Scorr icon and sign in.

- Enable Location when prompted so GPS attendance works.

15. Sign In, Passwords & Security

- Everyone signs in at <https://scorr.walfia.ai> with email + password.
- Role decides which dashboard opens.
- Users can change their own password from profile settings.
- Admins can reset any user's password from the Users directory.
- Each company's data is isolated — no cross-company access.
- Platform owner (Walfia) approves new company registrations in a separate Companies portal.

16. Quick Troubleshooting

Problem	What to try
Cannot sign in after register	Wait until company is approved. Use the exact email/password from registration.
Wrong dashboard opens	Your role is set incorrectly. Ask Admin to check role on Users tab.
Cannot add users	You must be Admin (not Manager/Employee). Demo admin cannot add real users.
Manager list empty	Create Manager accounts first, in the same department as the employee.
Department required error	Managers and employees need a department. Create one under Departments.
GPS check-in fails	Enable location permission; confirm Admin assigned an Office GPS site.
No daily reports visible	Only Admin sees others' reports. Staff must submit from Daily Report tab.
Android install blocked	Allow "Install unknown apps" for your browser, then open the APK again.

Need help?

Website: <https://scorr.walfia.ai>

- Register: Home page !' Register Company
- Sign in: Home page !' Sign In
- Download apps: Home page !' Mobile App section
- This guide: /downloads/Scorr-Client-Feature-Guide.pdf

Thank you for using Scorr. With clear roles, simple registration, and one place to add your team, your organization can run performance, attendance, and rewards together.
